CircularPanel Control Reference

Arrange child elements in a circular layout.

Reference **Controls** **Editors** CircularPanel

The TCircularPanel implements a custom navigation tool, where the options are placed around a main circle.

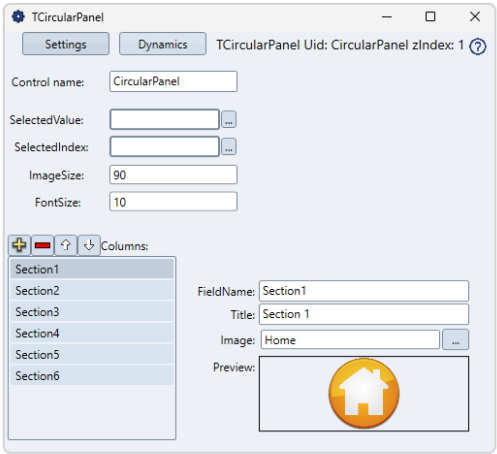
Configuration
Runtime Execution



Requirements

This component is WPF-only, therefore, it runs only on Windows, RichClient and SmartClient clients.

Configuration

Circular Panel Settings	
Field	**Description**
Control Name	Defines a name for the control so it can be accessed in the CodeBehind script. See Display CodeBehind.
Selected Value	A tag associated to this field will receive a string containing the FieldName property of the currently selected item in the CircularPanel.
SelectedIndex	A tag associated with this field will receive the index corresponding to the currently selected item in the CircularPanel. The indexes work like an array, with the first item having an index of 0, the second an index of 1, and so on
ImageSize	Size of the selected image.
FontSize	Size of the font used on the component.
Columns	For each value that you want to include, select a section and configure the settings to the right of the list (described below). The panel displays a section for each column.
FieldName	Name of the field to be used.

Title	Name to be shown on the component.
Image	Select a resource image to display.
Preview	Read-only display of selected image.

Runtime Execution

In Runtime, the control has embedded controls to allow the Operator to modify the view.
