Database OleDB Provider Connector

Databases (or spreadsheets) supporting OleDB interface

- Name: **OleDB**
- Version: 1.0.0.0
- Protocol: OleDB
- Interface: TCP/IP
- Runtime: .NET 2.0 (Multiplatform)
- Configuration:
  - Datasets / DBs

OleDB

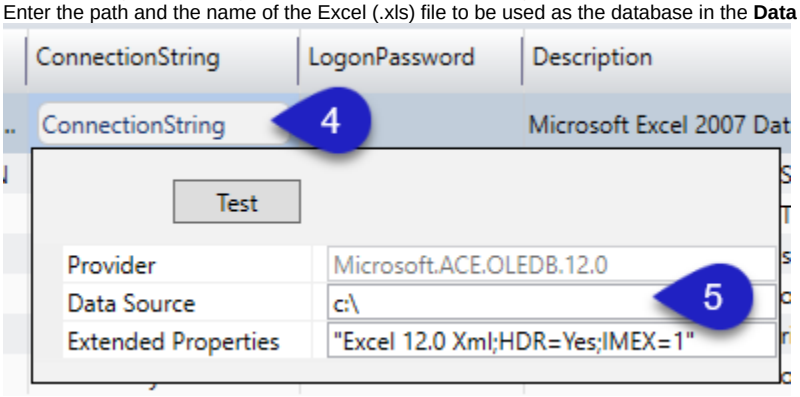

Overview

This section will connect with Excel files using OleDB

OleDB

OleDB enables higher abstraction and flexibility when connecting to data sources, supporting a more comprehensive range of data access technologies and file formats. To connect using this method, follow the steps below:

1. Access **Datasets** / **DBs** and click the **plus icon**.
2. Select **ODBC Data Provider** as **Provider** and choose the **Microsoft Excel Database** as **Database**.
3. Click **OK**.
4. After returning to the data grid, click the **Connection String** column related to the newly created row.
5. Enter the path and the name of the Excel (.xls) file to be used as the database in the **Data Source** field.
