Accessing Find Results

Opening the Panel

Method	Action	Location
Toolbar	Click Find Elements icon	Main toolbar
Keyboard	Press Ctrl+F	Any context
Context Menu	Right-click Find References	On any object

Panel Interface

Search Controls

Control	Function	Description
Text Box	Object name entry	Type or paste object name
Browse (...)	Object browser	Select from list
Search	Refresh results	Update cross-references
Previous	Navigate backward	Go to previous reference
Next	Navigate forward	Go to next reference

Results Table

Column	Description	Action
Module	Configuration area	Shows module containing reference
Location	Specific item	Exact configuration location
Property	Usage context	Property or field using object
Value	Current setting	How object is referenced

Using Find Results

Basic Workflow

1. **Select Object**
   - Type name in text box, or
   - Click browse (...) button to select
2. **Review Results**

- Table shows all usage locations
- Count displays total references

3. **Navigate to Location**
   - Double-click any row to jump there
   - Use Previous/Next for sequential navigation

Search Options

Option	Description	Use Case
Exact Match	Object name exactly	Specific object
Partial Match	Contains text	Multiple similar objects
Case Sensitive	Match case exactly	Precise searching

Common Use Cases

Refactoring

Task	Process
Before Rename	Check all references
Before Delete	Verify no dependencies
Impact Analysis	Understand connections

Debugging

Issue	How Find Results Helps
Missing Data	Locate all tag references
Script Errors	Find script usage locations
Display Problems	Check display bindings

Navigation Features

Quick Navigation

Action	Result
Double-click row	Opens configuration and selects object
Previous button	Moves to previous reference in list
Next button	Moves to next reference in list
F3	Find next occurrence
Shift+F3	Find previous occurrence

Navigation History

The panel maintains navigation history:

- Previous searches accessible via dropdown
- Recent objects list for quick access
- Bookmarks for frequent searches

Advanced Features

Filtering Results

Filter	Shows	Hides
Module Type	Selected modules only	Other modules
Property Type	Specific properties	Other properties
Direct References	Direct usage only	Indirect references

Export Options

Format	Use Case
CSV	Documentation
Clipboard	Quick sharing
Report	Formal analysis

Performance Tips

Large Solutions

- Use specific object names
- Apply filters before searching
- Search incrementally
- Close unused result tabs

Search Optimization

Tip	Benefit
Use exact names	Faster results
Limit scope	Reduced search time
Cache results	Quick re-access

Troubleshooting

Common Issues

Problem	Cause	Solution
No results found	Object not used	Verify object exists
Incomplete results	Solution not built	Build solution first
Slow search	Large solution	Use filters
Navigation fails	Document closed	Reopen document
