XML File Tag Importer

Explanation on to import tags from a XML file.

The Import Tag Wizard facilitates importing tags from an XML file into solutions developed on the software platform. Users configure the import process by specifying the XML file path, schema, and mappings. To use it, go to Solution/Import Tags, double-click on the XML File import wizard, or click to select XML File and press the Execute button to open the configuration dialog.

Tutorial

Tutorial

The tutorial in the image below shows how to import tags from an XML file. To do this, first export the XML file from your solution, navigate to Solution /Export and click Export AssetTree to XML. The exported XML file will be saved in the following directory: `C:\Users\User\Documents\<ProductName>\TempStore`. Then, locate the file in that directory and use it as needed for tag import in any other solution. For more details, refer to the Solution/Export.
