Extensions API Reference

Extend functionality with custom APIs.

This section provides reference links for extension APIs, allowing the creation of additional components and enabling external applications to interact with the system. Published APIs include:

- **Communication Between Solutions**: DataAccess API Reference empowers you with the capability to access classes and methods, facilitating communication between solutions.
- **HTTPS Requests**: WebAccess API Reference for data exchange with FrameworX servers.
- **Communication Drivers**: DriverToolkit API Reference for additional device protocols and Connector Implementation Reference for deeper explanation of how a protocol works.
- **Graphical User Controls**: Custom Control API Reference for WPF, HTML5, or portable controls.
- **Engineering Automation**: EngWrapper API Reference for creating solutions through C# code.
- **Solutions Management**: RemoteManager API Reference for managing multiple installations.

Consider using the built-in classes and tools available natively in the platform before creating new external components.
