Layouts and Navigation Tutorial

Design display hierarchy and create navigation.

This Tutorial Teaches you to:

- Create and configure new Layouts
- Change layouts in runtime

This Tutorial Teaches you to:
1. Creating new Layout
2. Changing Layouts in Runtime

1. Creating new Layout

1. Go to **Displays Layouts**
2. **Click** on **Insert New**
    a. **Layout Name:** LayoutDemo
3. Press **OK** button
4. On the **Panels**, you will be able to see different formats, that can be edited by changing the **"Edit"** option.
5. Change the Panel to **Content**
6. In the table on the bottom, you can choose different displays to be under **Page, Mobile, MobileLandscape** (if needed, create different displays to use here)

2. Changing Layouts in Runtime

1. In the **Displays Draw**, add two **buttons**
2. **Double-click** the first button, and under **Label Text** add: Startup Layout
3. Go to **Dynamics**, set **Actions** and choose **OpenLayout**
4. In **Layout**, type **Startup**
5. Repeat the procedure for the second button, but this time, the configuration is below:
    a. **Label Text**: Layout Demo
    b. **Layout**: LayoutDemo
6. Run the solution
7. Click the buttons to see the layout changing
