Solution Center
Designer
Runtime
Workflow

FrameworX manages the complete Solution Lifecycle, from development through production, using three integrated workspaces::

Workspace	Purpose	Launches
Solution Center	Create and manage solution files	Designer, Runtime
Designer	Configure solutions using the Four Pillars Methodology.	Runtime
Runtime	Execute the solution in real-time	—

Solution Center

Entry point for all FrameworX operations.

- **Solution management** — Create, open, copy, archive solutions
- **License control** — Manage product activation
- **Launch point** — Start Designer for configuration or Runtime for execution

More on Solution Center

Designer

Configuration workspace for all solution modules.

- **Unified environment** — One tool for all modules
- **Four Pillars Methodology** — Organized approach to configuration
- **Build and validate** — Test configurations before deployment
- **Launch point** — Start Runtime directly from Designer

More on Designer

Building Solutions — Understanding the configuration model

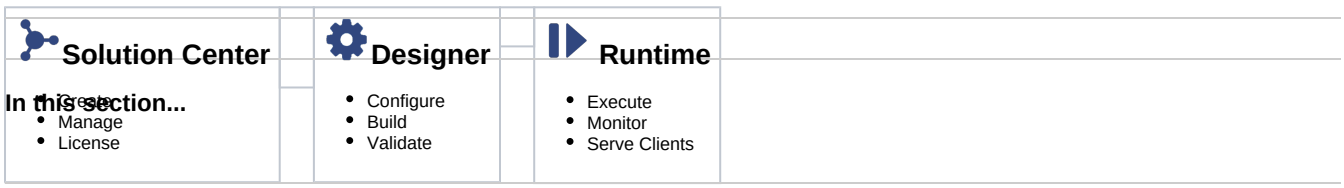

Runtime

Execution environment for production operation.

- **Real-time operations** — Execute solution configuration
- **Client services** — Serve desktop, web, and mobile clients
- **Performance monitoring** — Track system health and metrics
- **Multi-platform** — Windows, Linux, macOS, containers
