DriverToolkit API Reference

Programmatic API for developing custom communication drivers.

The DriverToolkit API enables the development of communication drivers. This API facilitates the integration of new communication drivers, allowing for the expansion and customization of communication interfaces, ensuring compatibility, and extending the software platform's capabilities to communicate across different devices, networks, and protocols. The toolkit provides the necessary tools to develop, test, and deploy drivers that enhance device interoperability.

If you need to access this API, contact us through support@tatsoft.com.
