RemoteManager API Reference

Programmatically manage multiple FrameworX installations and product/solution releases.

The RemoteManager API enables users to connect to and manage multiple installations and various product and solution releases. This API facilitates the centralized control and configuration of FrameworX ecosystems, ensuring efficient management and synchronization across different deployments. It supports real-time updates and integration capabilities, streamlining user operations and maintenance tasks.

If you need to access this API, contact us through support@tatsoft.com.
