Display Namespace Reference

Access display state and operations via scripts.

The **Display Namespace** exposes runtime display state to .NET scripts. Use **`@Display`** to reference the namespace, followed by the accessors listed below.

Display Members

Display Members

Direct properties and methods on `@Display`.

Member	Kind	Type	Description
`logOn`	Property	`Display`	Page activated by the Security LogOn menu on Rich Clients
`mainPage`	Property	`Display`	Solution home page (shows in Preview images)
`selectPage`	Property	`Display`	Page activated by the File Open menu on Rich Clients

Member set generated from FrameworX 10.1.5. For the full .NET API surface see the external Display Namespace .NET API Reference.
