Designer Drawing Tools

The Drawing tab has the following controls to create, format, and configure displays:

- Vertical toolbar—On the left side of the Drawing tab. Use these buttons to draw shapes, add buttons, and create special windows. For more information, see Table 1.
- Horizontal toolbar—Across the bottom of the Drawing tab. Use these buttons to group, combine, align, and lock the selected objects. For more information, see Table 2.
- Appearance, DisplaySettings, and other settings—Below the main menu buttons, these settings vary based on the type of object selected.

To configure dynamic graphic displays, click on the "Draw" icon in the main menu.

The Appearance parameters dictate the brush style and color used when drawing objects in the display. Clicking on the Fill option lets you specify the colors, gradients, or objects with which to fill the graphic.

The DisplaySettings dictate the attributes of the display. Displays can be configured as Pop Ups, Dialogs, or as normal page displays.

Like with any graphical object, displays can have varying colors and patterns, borders, titles etc.

One special feature is that you can specify that a transition animation is used when entering the display.

Vertical toolbar commands	
Commands	**Description**
Selection Tool	- Click on an object to select it. - CTRL+click selects multiple objects and object groups. Hold down the CTRL key as you click on each object. - Shift+click to choose a main object from a group of selected objects - Click in an open area of the display and highlight several elements to select a group of elements - Double-click on an object to open the "Dynamics configuration" window that provides settings for dynamic object properties.
Direct Selection Tool	- Use this tool to select an object inside a group and modify its properties. Click on the object once to select it. - You can also add, remove, and modify the points in a Polyline with the Direct Selection Tool. - To move the point, click on the point to select it and hold down the left mouse button. Drag the point to its new position. - Double-click on a point to add a new point adjacent to the selected point. - Right-click on a point to delete the selected point.
Hand Tool	The Hand tool can be used to modify the view window. Click once on the display background and hold down the left mouse button. Then, shift the display to the desired position.
Geometric objects tools	Right-click to end the use of each tool. To add, modify, and/or remove points after creating a polygon or polyline, use the Direct Selection Tool.
