

Tags - Enumerations Sets

Download the Project Example here:

[TagEnumerationSets.tproj](#)

- **Project Name:** TagEnumerationSets
- **Software Version:** 9.2 sp2 (9.2.26)
- **Keywords:** Tags. Enumeration Sets.

Project Summary

Sample showing the use of representing numeric values with text by using Enumeration Sets.

Technical Information

This project shows how to translate **Tag Values** to text using **Enumeration Sets**. These **Dictionaries** cause a device to have an example value like 0 or 1 display strings On and Off. It is also possible to represent these values in different Tags, Symbols and Graphics.

Using this infrastructure, you can configure enumeration sets on **Run Dictionaries Enumeration Sets**. You can also organize your project defined categories to Tags, Symbols and other elements.

Reference Information

See "[Tags - Assets and Templates](#)" and "[Dictionaries](#)" for more information.
